pop()

a method used to remove the last element of an array

Keyword(s):

pop,array

S

Sass/Scss

Sass is a popular CSS preprocessor that is used to write Bootstrap 4's own CSS.

Uglification

Uglification is what uglify-js and similar libraries call it when they optimize JavaScript files for speed, a process mainly composed of minification and "mangling" of variables (taking variable names and making them shorter and less human-readable, usually by replacing them with single-letter variables). The opposite of uglification is a process called beautification.

Every once in a while, the word uglification is used as a synonym for minification.
